Question: Think how you might by able to handle multiple sentences in the same map method.

One solution to that would be to use the new line separator when tokenizing the sentence. If we have multiple lines in the same sentence then we could use the '.','?' and other punctuation as the separator for two sentences since that would commonly mark the end of the sentence.

All the output of WordCount.java and Driver.java files are attached as txt files:

WordCount.java output:
   word_count_part0.txt and word_count_part1.txt

Driver.java output:
   part-r-00000.txt and part-r-00001.txt

Java file and Jar files are also included in this tar arhive.
